CHANGE HISTORY

This section describes the details of changes that have resulted in the current document.

SL. No.	Document Version No.	Change Description	Reason For change	Prepared By & Date	Reviewed By & Date	Approved By & Date
01	Issue B Version 1.0	Revised the Document to suit the requirements for implementation of the integrated management system	Implementation of the Integrated Management System	Sushmitha S 04/07/22	Megha VK 06/07/22	Rama G 08/07/22
02	Issue C Version 1.0	Review of document	New version update of IMS	Anitha N 01-08-2025	Santosh V 08-Aug-25	Sanmangala MS 14-08-2025

1 Purpose

The purpose of this document is to assemble the various product components and ensure that the integrated product possesses the required functionality and quality attributes. The process also helps in management of external and internal interfaces of the product and product components to ensure compatibility among the interfaces.

2 Scope

This process is applicable for all the projects in Utthunga.

3 Detailed Process

3.1 Entry Criteria

- Completed code of individual component / module without any compilation errors / warnings
- Unit tested / Developer tested module/component with all identified issues fixed
- Updated, reviewed, and approved design document having integration of business rules and components

3.2 Exit Criteria

- Updated integration plan
- Build Release for testing

3.3 Reference Standards

CMMI 2.0 Level 3 Dev

3.4 Process Description

#	Activity	Input	Description	Responsibility	Output
1	Create/update integration/ Build Plan	Project Plan template Build Guidelines	• Create build plan • Identify the type of built / integration approach	Project Manager / Tech Lead / Solution Architect	Updated PP with Build / Integration Plan

			• Identify the build sequence approach • Define the strategy for performing the build • Identify pass and fail criteria for the build. • Review and approve the build plan.		
2	Identify Integration Environment & Interfaces	BRS/FRS User Stories Blueprint HLD/LLD FS / TS/ Prototype	• Identify environment in terms of tool, hardware and software required for performing the build. • During the requirements gathering and also further during the design, identify the interfaces amongst various components are to be defined. • Interfaces can be either internal or external components or systems / applications.	Project Manager / Solution Architect / Tech Lead	Build / Integration Plan
3	Execute Build	Build guideline	• Ensure the product component is		

			ready for integration based on the integration criteria. • Assemble product component based on the integration sequence in integration plan • In case of continuous integration follow the continuous integration steps as per the tool.		
4	Record and Analyze Result		• Record the build / integration result		Integration test result
5	Pass / Fail?		• Check if the integration criteria is met or not. If not, fix the problem and repeat the build cycle till the pass criteria is met.		
6	Upload Built for Release		• Ensure that the integrated product is ready for delivery.		
7	Create Release notes	Release notes Template	• Release note can be created for every delivery		Release notes
